

## Status Manufacturing

### Status Manufacturing

- **Job Cost Estimates**

Build up of estimated job specification with as much Bill of Material & Production Route data as necessary.

- **Customer Accounts**

Maintain customer details including Delivery Addresses, VAT Registration, Foreign Currency data & various terms.

- **Production Job Details**

Holds Bill of Material & Production Route with cost info upon which margin & profit are calculated. Allows 'what-if' calculations with graphic analyses, including Contribution Analysis & Batch Size / Selling Price combinations.

- **Sales Orders & Schedules**

Processing customer demand automatically updates the manufacturing system. Generates sub-part demand, handles extended customer schedules, spot & multi-drop orders with Sales Order Acknowledgements e-mailed direct to contacts.

- **Capacity Planning & Work to Lists**

Graphical shop-floor layout defining machines, groups of machines & other processes. Each process displays its own Work to List of operations required & current stock position. Recalculates capacity requirements & will feed directly on production data entered from shop floor.

- **Material Purchase Planning**

MRP utilises Bill of Materials data against Job Specification to calculate gross demand of raw materials & bought out items in conjunction with overall customer demand.

- **Stock & Inventory Control**

Automatic updates of Raw Material, Bought Out Items, Work in Progress & Finished Goods stock. Features full stocktake routine & reporting facility (including valuation reports)

- **Works Orders & Manufacture**

Barcoded Works Orders hold the key to traceability & performance & are used to extrapolate machine capacity and material requirements.

- **Purchase Orders & Supplier Schedules**

PO's can be raised for single deliveries, blanket (contract) orders or for a schedule of dates and quantities. Orders can be automatically updated with the calculated MRP demand

**Other Standard modules include:**

Purchase & Sales Invoices, Despatching, Labelling, Management Reporting and Links to Accounts software

**Additional Modules:**

- **Vision Planner**

A production and purchasing planning suite

- **Vision Scheduling**

A full Finite Capacity Planning suite

- **Vision Reporter**

Web-based reporting tool

- **iFAMM (Internet First Alert Machine Monitoring)**

Web based Real-time Machine Monitoring

- **SFDC (Shop Floor Data Capture)**

PC Based Barcoded Data Collection facility

- **First Alert**

Real-time Alerting system linked to SFDC.

### Status Manufacturing (Formerly Trojan)

Our products are aimed at assisting repetitive batch manufacturers to be more efficient. Status Manufacturing includes estimating, MRP, ERP, finite capacity scheduling, real-time production monitoring & data collection, job costing, real-time factory alerts and accounts links. A fully integrated manufacturing package specifically designed to meet the needs of batch manufacturers of assemblies, components and/or finished product.

The system allows the user to develop and maintain an accurate estimate, which is then used to generate a quotation for the client. The estimate includes all of the elements of the job, including Bill of Material (BOM), manufacturing route and will provide alternative batch prices.

Once accepted by the client, the estimate is converted into a job cost planning sheet and route card. This data forms the foundation for the fully functional and comprehensive production control system. The result of this is that the user is ensured of manufacturing for profit.

### The Benefits

- Developed with batch manufacturers over thirty years
- Mirrors your existing way of working
- Assists with the effective management of resources
- Helps control costs
- Assists with production planning and control
- Provides comprehensive history
- Links to accounting, payroll, data capture, quality and other systems.
